The P-20D is the pressure sensor which measures gauge pressures. It consists of a silicon micro-machined sensing element chip and a signal conditioning ASIC. The pressure sensor element and the ASIC are mounted inside a system-in-package and wire-bonded to appropriate contacts. The P-20D provides the digital output data with the format of I<sup>2</sup>C interface. It can achieve ESD robustness, fast response time, high accuracy and linearity as well as long-term stability. All measurement data is fully calibrated and temperature compensated. In addition, it allows for easy system integration.

Pressure transmitter has a variable semiconductor sensing element with a programmable ASIC and a hybrid circuit for reliable signal conditioning and maximum electronic integration.
